Art Unit 1653

1. Restriction to one of the following inventions is required under
35 U.S.C. 121:

I. Claims 1-31 are drawn to a method for preparing a nucleic acid
binding protein, classified in class 435, subclass 7.1.

2. This application contains claims directed to a method that
encompasses mutations at several positions. Applicant need to elect a
position to be mutated for purposes of examination. In addition, the claims
recite several base changes. Applicant need to elect a single base. For
example claim 1(a) recites if base 4 in the quadruplet is A, then position +6
in the α -helix is Glu, Asn or Val. Note also that the mutational changes to
the sequence results in proteins that are patenably distinct with different
structures and function and having the ability to bind to different nucleic
acids. Therefore, an election of a single position and single base change for
examination on the merits is required.

Applicant is reminded that upon the cancellation of claims to a non-
elected invention, the inventorship must be amended in compliance with 37
CFR 1.48(b) if one or more of the currently named inventors is no longer an
inventor of at least one claim remaining in the application. Any amendment of
inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the
fee required under 37 CFR 1.17(I).

Applicant is advised that the reply to this requirement to be complete
must include an election of the invention to be examined even though the
requirement be traversed (37 CFR 1.143).
